Permissions, statuses and known limits

Conventions

Bold text is a label you will see on screen. Dark blocks are literal values or file names. Each chapter starts on a new page, so you can print just the part you need.

Quick start

1. Open Team and add yourself with your shift window and rate.
2. Go to Dashboard and tap Check in when you start work.
3. Tap Break before you step away and Resume when you are back.
4. Tap Check out at the end of the day, then review it in History.

01 · OVERVIEW

What the app does

Attendance Tracker is a simple time clock that lives on one phone. You tap a button when you start work, when you step away and when you go home. The app remembers the exact time of every tap, adds the hours up, and puts the totals in a report you can hand to whoever does payroll.

There is nothing to sign up for — no account, no monthly fee. Your records stay on the phone, and a copy is kept in the Downloads folder so you can move it somewhere safer whenever you like.

The five screens

Screen	What you do there
Dashboard	Check in, take a break, check out, log overtime, undo a wrong tap.
History	Look at any month, filter by person, open a day to fix or delete it.
Team	Add people, set their shift hours, work days and hourly rate.
Reports	Totals and a per-person breakdown for a week or a month, saved as Excel or CSV.
Settings	Shift rules, currency, backups, restore and updates.

A normal day

One tap per event — the app does the arithmetic

> **Nothing leaves the phone**
> Your records are not uploaded anywhere. The app works with no signal, and the only time it uses the internet is to check whether a newer version of itself is available.

Who it is for

- A small team with one phone at the door or the front desk.
- Freelancers and remote workers who bill by the hour.
- Anyone who needs a plain record of when they started and stopped.

Install and first run

Installing

1. Copy the app file to the phone. It ends in .apk and is usually sent as a link or a chat attachment.
2. Tap the file in your file manager. Android asks whether to allow installs from that app — allow it once.
3. Open Attendance Tracker. The first launch sets everything up and creates a starter profile.

The first launch, in order

- The app checks that its saved data is readable. If something is wrong with it, the newest backup from Downloads is put back automatically.
- If there is no one in the team yet, a starter profile is created so the dashboard is never empty.
- The dashboard opens with today's record already loaded, ready for your first punch.

Granting the update permission

Android does not let one app install another unless you say so. The first time an update is ready, the phone opens the “Install unknown apps” screen for Attendance Tracker. Turn the switch on and go back — the download is kept, so the install carries on where it stopped.

> **You stay in control**
> The app never installs anything by itself. It downloads the update, then Android shows you the normal install screen and waits for you to tap Install or Cancel.

What you need

- Android 5.0 or newer. The app is dark-themed by design.
- About 12 MB of free space for the app, plus room for your backups.
- An internet connection only when you check for updates.

If you reinstall

Uninstalling removes the app's own copy of your data, but it does not touch the AttendanceTracker folder in Downloads. The next time you open the app it finds those backups and puts the newest one back, so a reinstall does not cost you your history.

Where to start

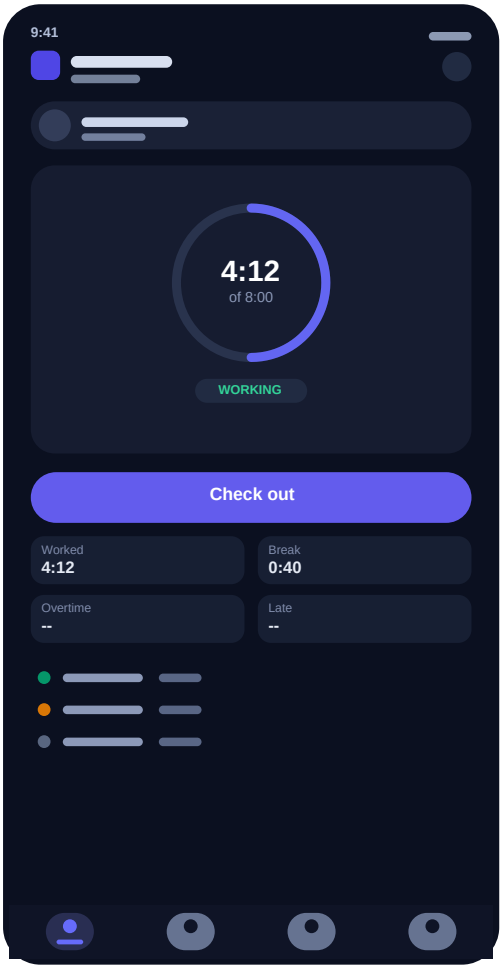

If you want to...	Go to
Record your own time	Dashboard, then the big button
Fix a punch you forgot	History, tap the day, then Edit
Add a new hire	Team, then the round + button
Change the shift window	Settings, Shift section
Send hours to payroll	Reports, then Export

03 · DASHBOARD

The screen you use every day

The dashboard is the home screen. Everything on it refers to one person — the profile shown in the chip at the top — and to today's date.

Dashboard

Ring
Progress through the required minutes. It fills live, once per second.

Status pill
Working, On break, Done, Not started or Absent.

Primary button
Changes with the state: Check in, Break, Resume, Check out.

Stat cards
Worked, break, overtime and lateness for today only.

Timeline
Every punch of the day, newest last, with its exact time.

Bottom bar
Moves between Dashboard, History, Team and Reports.

Punching in and out

Tap the big button. The app writes the current time into the next empty slot, saves it straight away and writes a backup a moment later. The button always tells you what the next tap will do, so you never have to remember which slot is next.

- Check in -> Break -> Resume -> Check out, then a second break cycle if your shift has two breaks.
- Made a mistake? Tap Undo. It clears the most recent punch only, never the whole day.
- Need to fix an older punch? Tap Edit today to open the same editor the History screen uses.

> **Reading the ring**
> The arc is worked minutes divided by required minutes, so a full ring means the shift is complete. The number inside is worked time, the line under it is the requirement, and both refresh once a second while the screen is open.

03 · DASHBOARD

How punches become hours

A day is a set of In/Out pairs. An In starts a working segment, an Out ends it and starts a break. The app walks the punches in order, so a day with only an In and an Out still produces sensible totals.

Working time is the sum of the gaps between an In and the next Out.

The six slots

Slot	What it is	Meaning
1	Check in / Break	Start of the shift, then the first break.
2	Resume / Break	Back from break, then the second break.
3	Resume / Check out	Second return, then the end of the day.
OT	Overtime	Optional pair, counted on its own.

What each number means

Figure	Computed from
Worked	Sum of every In to the next Out. An open segment counts up to now.
Break	Sum of every Out to the next In.
Late	Check-in minus shift start, when it exceeds the grace minutes.
Undertime	Required minutes minus worked, never below zero.
Overtime	The OT pair when set, otherwise minutes worked past shift end.
Required	Shift length minus the configured break allowance.

Two overtime modes

Pair mode counts only the overtime you log yourself, using the overtime buttons on the dashboard. After-shift mode counts anything worked past the end of the shift, which suits people who stay late without logging it separately. Switch modes in Settings > Shift.

04 · HISTORY

Looking back

History

Month header
Arrows step one month at a time. The summary strip below covers the month you are looking at.

Filter
Narrow the list to a single person, or leave it on Everyone.

Rows
Date on the left, status badge and total hours on the right. Tap a row to open the day.

Opening a day

Tapping a row opens a detail card with every punch, the computed totals and the note field. From there you can:

- Edit — open the full editor with all eight time fields.
- Delete — remove the record entirely, after a confirmation.
- Mark leave or holiday — keeps the date on the calendar without counting it as worked time.

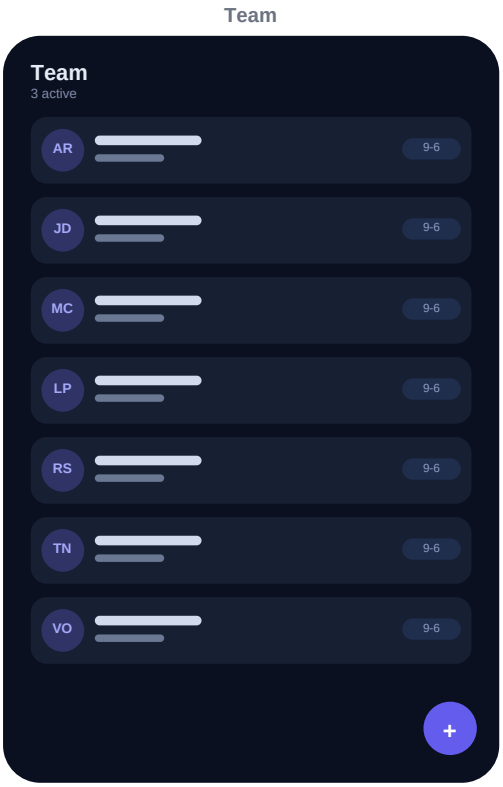

The day editor

The editor shows eight time fields, a status picker and a note. Times accept both 12-hour and 24-hour input: 9:42 AM, 9:42am, 21:42 and 9 PM all work. Anything that cannot be parsed is rejected before saving, and the preview at the bottom recalculates as you type.

> **Status is derived, not typed**
> When a record has punches, the status is recalculated from them: Present, Late, Half day, Incomplete or In progress. Leave, holiday and absent are the only statuses you set by hand.

05 · TEAM

People and shifts

One list, one form

The list shows every person with their initials, position and shift window. Tap a row to edit, tap the round button to add someone new.

Archiving keeps history

Turning Active off hides the person from the dashboard picker without touching their records, so old months still add up.

Employee fields

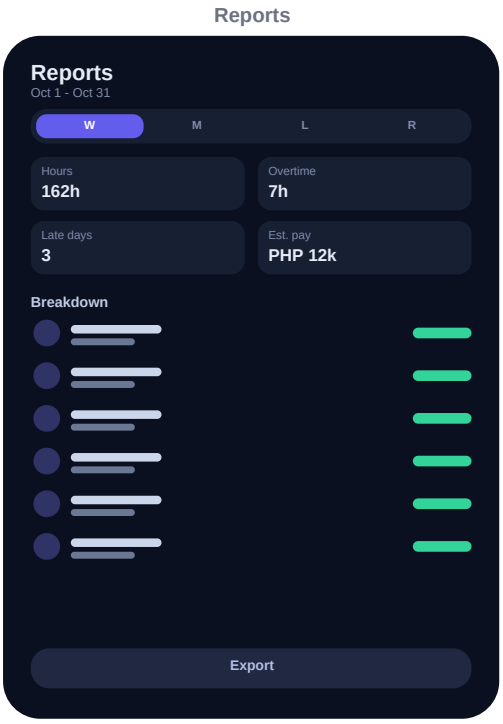

Field	Used for
Name	Shown everywhere; initials are used for the avatar.
Position	Free text, shown under the name in the list.
Code	Optional employee number or nickname.
Hourly rate	Estimated pay in Reports. Leave it at 0 to hide pay figures.
Shift start / end	The window used for lateness and overtime.
Work days	Which weekdays count as working days, Monday to Sunday.
Active	Whether the person appears on the dashboard.

Overnight shifts

If the end time is earlier than the start time, the app treats the shift as crossing midnight. A 22:00 to 06:00 shift works without extra setup.

06 · REPORTS

Turning days into numbers

Period
This week, this month, last month, or any two days from the calendar.

Range
Tap a start day, then an end day. Show applies it, Clear empties it.

Four totals
Hours worked, overtime, late days and estimated pay.

Breakdown
One row per person: days, overtime, late count and hours.

One file per export
Every export is a new dated file, so nothing is overwritten. The Excel file also has a Summary sheet that sums each person.

Estimating pay

Pay is worked hours times the hourly rate, plus overtime hours times the rate times the overtime multiplier. It is an estimate, not a payslip: no tax, deductions or allowances are applied.

Period	Range used
This week	Monday to Sunday of the current week.
This month	First to last day of the current month.
Last month	First to last day of the previous month.
Range	Any two days, picked on a calendar.

Exporting

Tap Export and pick a format. Either file lands in Download/AttendanceTracker/exports, opens straight from the Downloads folder, and carries the same sixteen columns.

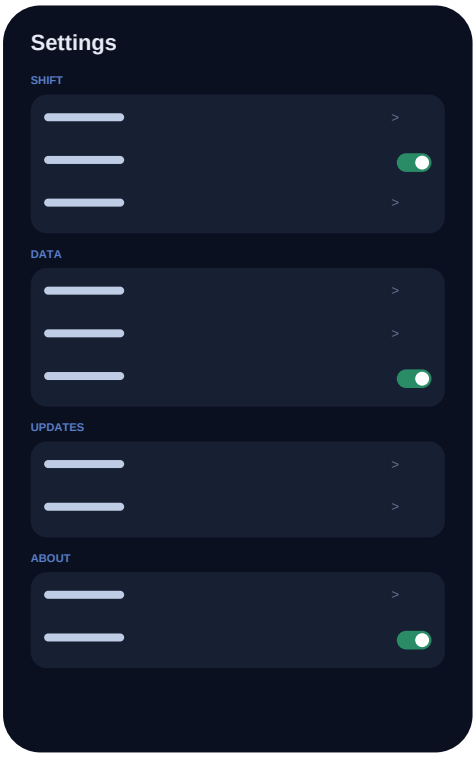

```
Date, Employee, Check In, Break 1 Start, Break 1 End,
Break 2 Start, Break 2 End, Check Out, OT In, OT Out,
Worked (h), Break (min), OT (h), Late (min), Status, Note
```

Format	Good for
Excel (.xlsx)	Totals you can add up: numbers stay numbers, and a second sheet sums each person.
CSV (.csv)	Feeding another system: plain text, opens anywhere.

07 · SETTINGS

Every switch explained

Settings

Setting	Default	Effect
Shift start / end	9:00 AM - 6:00 PM	Window for lateness and overtime.
Grace minutes	5	How late you can be before it counts as late.
Lunch break	60 min	Subtracted from the required minutes.
Coffee break	20 min	Added to the break allowance.
Half day below	240 min	Worked minutes under this become Half day.
Overtime mode	Pair	Pair counts logged overtime; After shift counts the tail.
OT multiplier	1.25	Applied to overtime hours in the pay estimate.
Currency	PHP	Prefix used in Reports.
Autosave	On	Writes a backup after every change.
Backup now	-	Writes an extra dated backup right away.
Restore	-	Pick a backup from Downloads, or browse for a file.
Check for updates	-	Asks the server right away, without waiting a day.
Check automatically	On	Looks for a new build once a day.

Changing the shift later

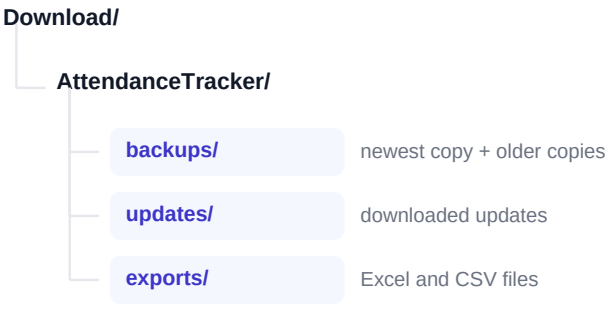

Shift edits apply to future calculations, not to stored punches. History recomputes on every open, so a corrected shift start fixes the late counts for past days too.

08 · YOUR DATA

Where everything is kept

Your records are saved twice. One copy lives inside the app and is the one you see on screen. A second copy is written to the Downloads folder every few seconds, so a crash, a flat battery or a reinstall never costs you more than the last few seconds of work.

The Downloads folder

What is inside backups

File	What it is
attendance_latest.db	The newest copy. Replaced after every change.
attendance_<date>_<time>.db	An older copy, kept once an hour. The oldest one is removed when there are too many.

Saving as you go

There is no Save button, and you do not need one. Two and a half seconds after any change the app writes the whole thing out again and swaps it in one step, so you never end up with a half-written file. Once an hour it also keeps a dated copy, so you can go back to how things looked a few days ago.

- The newest copy is what the app falls back to when something goes wrong.
- The dated copies are for going further back, when a mistake was made days ago.
- The app keeps 20 dated copies by default. You can raise that in Settings.

Putting a backup back

Every time the app opens it checks that its copy is readable. If it is missing or damaged, the newest backup that is still good is copied back into place. Before anything is replaced, the damaged file is set aside, so nothing disappears without a trace.

> **Restoring by hand**
> Settings > Restore lists every backup with its date and size. You can also pick a backup file from anywhere else on the phone. After a restore the app reopens so you are looking at the restored data, not the old data.

09 · UPDATES

Getting a newer version

The app can update itself, so you do not have to hunt for a new file every time something is fixed. It looks for a newer version once a day, and it never downloads anything until you agree to it.

1. **The app looks for a new version**
   Once a day, or when you tap Check for updates
2. **It compares that with what you have**
   If yours is already the newest, nothing happens
3. **You decide whether to download**
   The size and the release notes are shown first
4. **The update downloads**
   A progress bar shows how far along it is
5. **Android installs it**
   You tap Install on the screen that appears

What you will see

- The version number, so you can tell what you are getting.
- A short note about what changed in that version.
- The size of the download, and a progress bar once it starts.
- Two buttons: download now, or remind me later.

Before you update

- Make sure the phone has some charge and a little free space.
- Do not uninstall the old version first. The update goes on top of it.
- Your records, your settings and your team list are all kept.

> **If the install is blocked**
> Open the phone's Settings, find Apps > Attendance Tracker > Install unknown apps, and turn it on. Then open the app and start the update again.

If you would rather not be asked

Turn off Check automatically in Settings. The app will stop looking on its own, and you can still tap Check now whenever you feel like it, so nothing is ever forced on you.

10 · TROUBLESHOOTING

When something looks wrong

Symptom	What to do
The dashboard says Absent but I worked	The record has no check-in. Open Edit today and set the times, or use Undo if a punch was written to the wrong day.
Hours look too low	A break was never closed. Every Out must be followed by an In, otherwise the time after it is counted as break.
Overtime is zero	In Pair mode only overtime you log yourself is counted. Switch to After shift in Settings if you want time past the end of the shift counted instead.
Reports is empty	Check the period segment and the person filter. A picked range stays until you choose another one.
Restore does nothing	The file has to be a backup this app wrote. Damaged files are skipped on purpose, so pick a different one.
Update will not install	Allow installs from this app in the phone's settings, then try again. If the download was cut off, delete it from the updates folder and download it again.
The app restarts after a restore	Expected. The app reopens so you are looking at the restored data.
Everything is empty after reinstalling	The app puts the newest backup back on first launch. If it is still empty, open Settings > Restore and pick the file by hand.
The ring never moves	The ring only counts a working segment. If the status is On break or Done, there is nothing to count until you resume.
The wrong person is on the dashboard	Tap the name chip at the top and pick someone else. The choice is remembered until you change it.
A punch shows 0:00	The time was typed as a bare number. Write 9:00, 9am or 21:00 instead.
CSV opens as one long column	Some regions expect semicolons. Open it in Google Sheets directly, or export the Excel file instead, which keeps the columns intact.

Resetting everything

There is no factory reset button, and that is deliberate — a single tap should not be able to erase payroll history. To start clean, delete the app, then delete the AttendanceTracker folder in Downloads. A fresh install starts again with fresh records and a starter profile.

Diagnostics

- Settings > Storage info shows how much space your records use, how many backups you have and when the last one was written.
- If the app reopens by itself when you launch it, it put a backup back. That happens when its own copy was missing or damaged.
- Before updating, keep at least one older backup. If the new version misbehaves, restoring takes one tap.
- If something looks wrong, copy the AttendanceTracker folder to a computer before reinstalling, so you still have the old copies.

11 · REFERENCE

Statuses, permissions and limits

What the app asks for

You may see	What it is for
Internet	Only to check for a newer version and download it.
Install apps	Only to install an update you approved.
Files (older phones)	Only to write your backups into Downloads.

Nothing is sent anywhere. There is no account, no analytics and no crash reporting. The app works with no signal at all — the internet is used only when it looks for an update.

What the statuses mean

Status	Meaning
Present	Checked in and out, on time, enough hours.
Late	The same, but the check-in was past the grace time.
Half day	Worked less than the half-day minimum.
Incomplete	A check-in with no check-out, and not open right now.
In progress	Still working, or on a break right now.
Absent	No check-in at all.
Leave	Set by hand. Not counted as worked.
Holiday	Set by hand. Not counted as worked.

Good to know

- One phone holds the records. There is no syncing between phones.
- Times are recorded to the minute.
- Pay figures are estimates; tax, loans and government deductions are not included.
- Restoring an older backup throws away everything recorded after it.
- Changing phones? Copy the AttendanceTracker folder across, then restore from it.

Attendance Tracker 1.0.0
For Android 5.0 and newer
This manual describes the app as shipped in version 1.0.0.
